

EXPERT GLOBAL CONSULTING AGENCY

EGCA Mine Maturity Assessment: **Whole-mine maturity** baseline and insight in 4 weeks

A productised assessment that scores your operation across nine pillars and surfaces where management and frontline disagree about how the work actually runs. **Defensible to the board. Credible to the workforce. Actionable this quarter.**

We do not pursue work that lacks substance or impact.

Performance dashboards tell mining leaders **what** changed, but nothing in the toolkit tells them **where management and workforce alignment is causing problems**

ALREADY IN YOUR TOOLKIT

Performance dashboards

- KPIs
- Throughput
- AISC

Tell you what happened — output, cost, safety, recovery. Trailing indicators of operational state.

Blind spot: doesn't tell you why, or where to intervene first.

Internal audits

- Function-by-function
- Compliance-led

Tell you whether each department meets its own standard. Siloed by function, point-in-time, compliance-shaped.

Blind spot: miss the interfaces between functions where dysfunction actually lives.

MISSING

Whole-mine alignment view

- Across 9 pillars
- Across departments
- Across org layers
- Survey-based

Tells you where management's view of how the operation runs differs from frontline's view: pillar by pillar, layer by layer.

Why it matters: the gap between management belief and frontline reality is where most operational surprises originate

The assessment covers 9 operational pillars across the value chain, with **Operating Model** as the integrating pillar

Each pillar is scored on the standard **5-stage maturity scale** (Ad Hoc → Emerging → Defined → Managed → Optimised), tailored to mining operations.

The assessment can be run on a **single shaft** or site, or across **multiple operational sites** for internal benchmarking

Processing	62%	73%	67%	53%	55%	59%

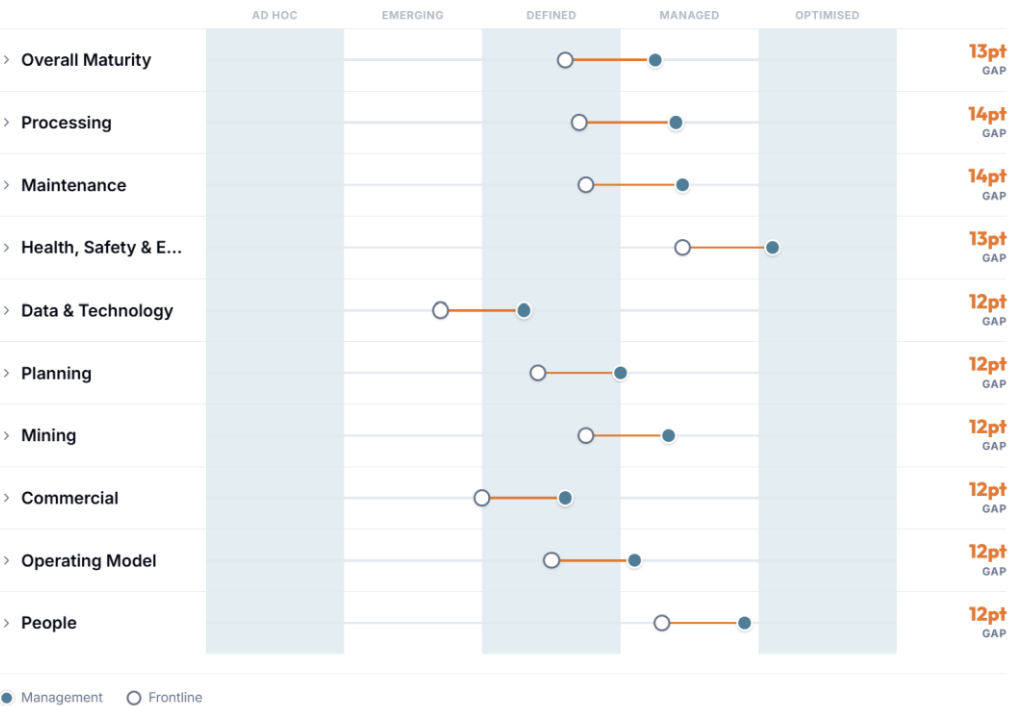

No comparable mining assessment or visual tool shows you management vs frontline and inter-departmental misalignment across core pillars

08 · ALIGNMENT

Where your teams see it differently

Management (17) vs frontline (19) perception, by pillar. Bigger gap means a larger misalignment in the perceived maturity of the organisation.

09 · DEPT ALIGNMENT

Where departments see it differently

Per-department perception, by pillar. Wider spread means departments disagree more on the pillar's maturity - a signal of inconsistent routines, uneven exposure, or siloed practices.

The delta is a
diagnostic...

Where management thinks "Defined" and the workforce experiences "Ad Hoc," that's where unplanned downtime, recordable incidents, and missed schedules originate.

You get a self-contained summary report, actionable by your internal team **with or without further engagement**

OUTPUT OF THE MATURITY ASSESSMENT

- 1

Maturity score per pillar

All 9 pillars scored 1–5 on the standard scale, with definitions and highly specific questions tailored to mining operations
- 2

Overall maturity index

Composite score and 5-stage positioning across the operation, with band thresholds explained and actionable insights generated.
- 3

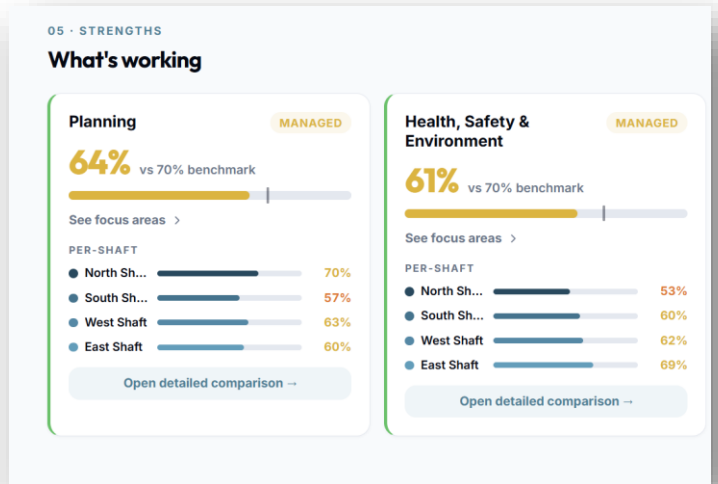

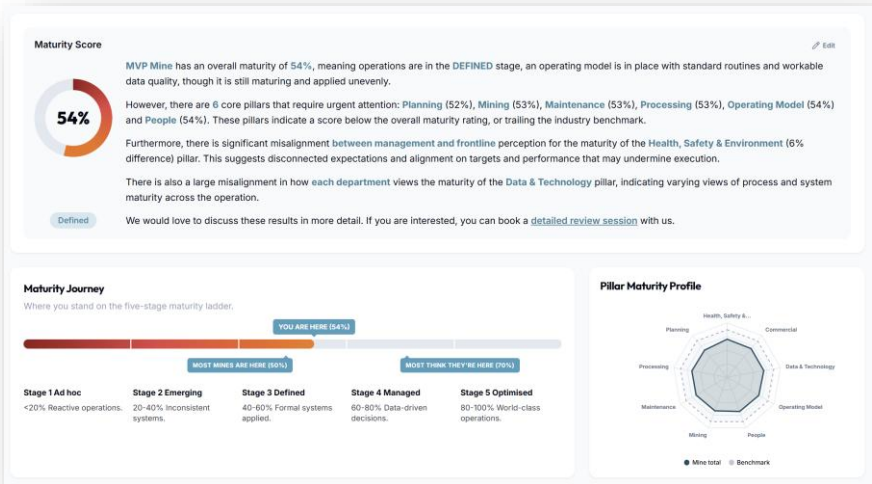

Management vs frontline alignment view

Per-pillar delta, plain-language interpretation, and call-out of the largest alignment gaps.
- 4

Prioritised lowest-maturity pillars

3–6 pillars ranked by composite score, each mapped to "what good looks like" at the next maturity level, with proposals on how they can be matured

Self-contained: A competent and well-resourced internal CI team can act on this without further engagement.

Maturity is measured on a 5-stage scale, with each level **defined by observable behaviour**, not abstract descriptors.

Each pillar uses a highly specific tailored version of this scale.

Behavioural anchoring at each level reduces ambiguity and improves cross-respondent consistency.

Most operations score in the **Emerging to Defined** band on most pillars. Distribution of scores tells you almost as much as the scores themselves.

A senior team with mining operating experience and a clear, defined first step

Our executive team will debrief you:

Odilon Kongolo (CEO)

Nuclear civil engineer with 15+ years' experience delivering large-scale project management, business improvement, asset-intensive optimisation, and capital project advisory at multiple notable mines in Africa

Morkel Erasmus (MD)

Industrial engineer, supply chain expert and consulting executive with 20+ years' experience leading operations, supply chain optimisation, and large-scale transformations in mining clients across the African continent

Cameron Collum (COO)

Finance professional with 10+ years' experience driving cost reduction, throughput improvement, and data-driven operating systems across mining and heavy industry

NEXT STEP

A 30-minute discovery call.

No prep required. We'll confirm fit, scope your operation, and lock a fixed-fee proposal within 5 working days.

FROM HERE TO SUMMARY REPORT

Day 0	Discovery call · 30 min · scoping & fit
Day 5	Fixed-fee proposal issued
Day 14	Kickoff · stratification agreed
Day 28–35	Summary report & feedback session

Delivered in four weeks, from kickoff to executive feedback

For a single site. Multi-site engagements run phases in parallel and typically complete in 4–6 weeks total.

If response rate falls short: Week 2 extends by 5 working days. Subsequent phases shift accordingly. Fixed fee unchanged — risk sits with us, not you.
