

Bridging the gap between **knowing** and
doing

EXPERT GLOBAL CONSULTING AGENCY

Expert Global Consulting Agency *Overview*

We are the go-to consulting firm for execution-based problem solving that delivers real value.

We take on complex operational challenges and work alongside our clients to deliver measurable improvements in performance.

We do not pursue work that lacks substance or impact.

EGCA CONSULTING

Expert Global Consulting Agency

Who are we?

EGCA is a world-class consulting firm dedicated to providing simple solutions to complex problems, and on delivering tangible return on investment for our partners.

30+ successful consulting clients.
Including 4 successful projects for Impala.

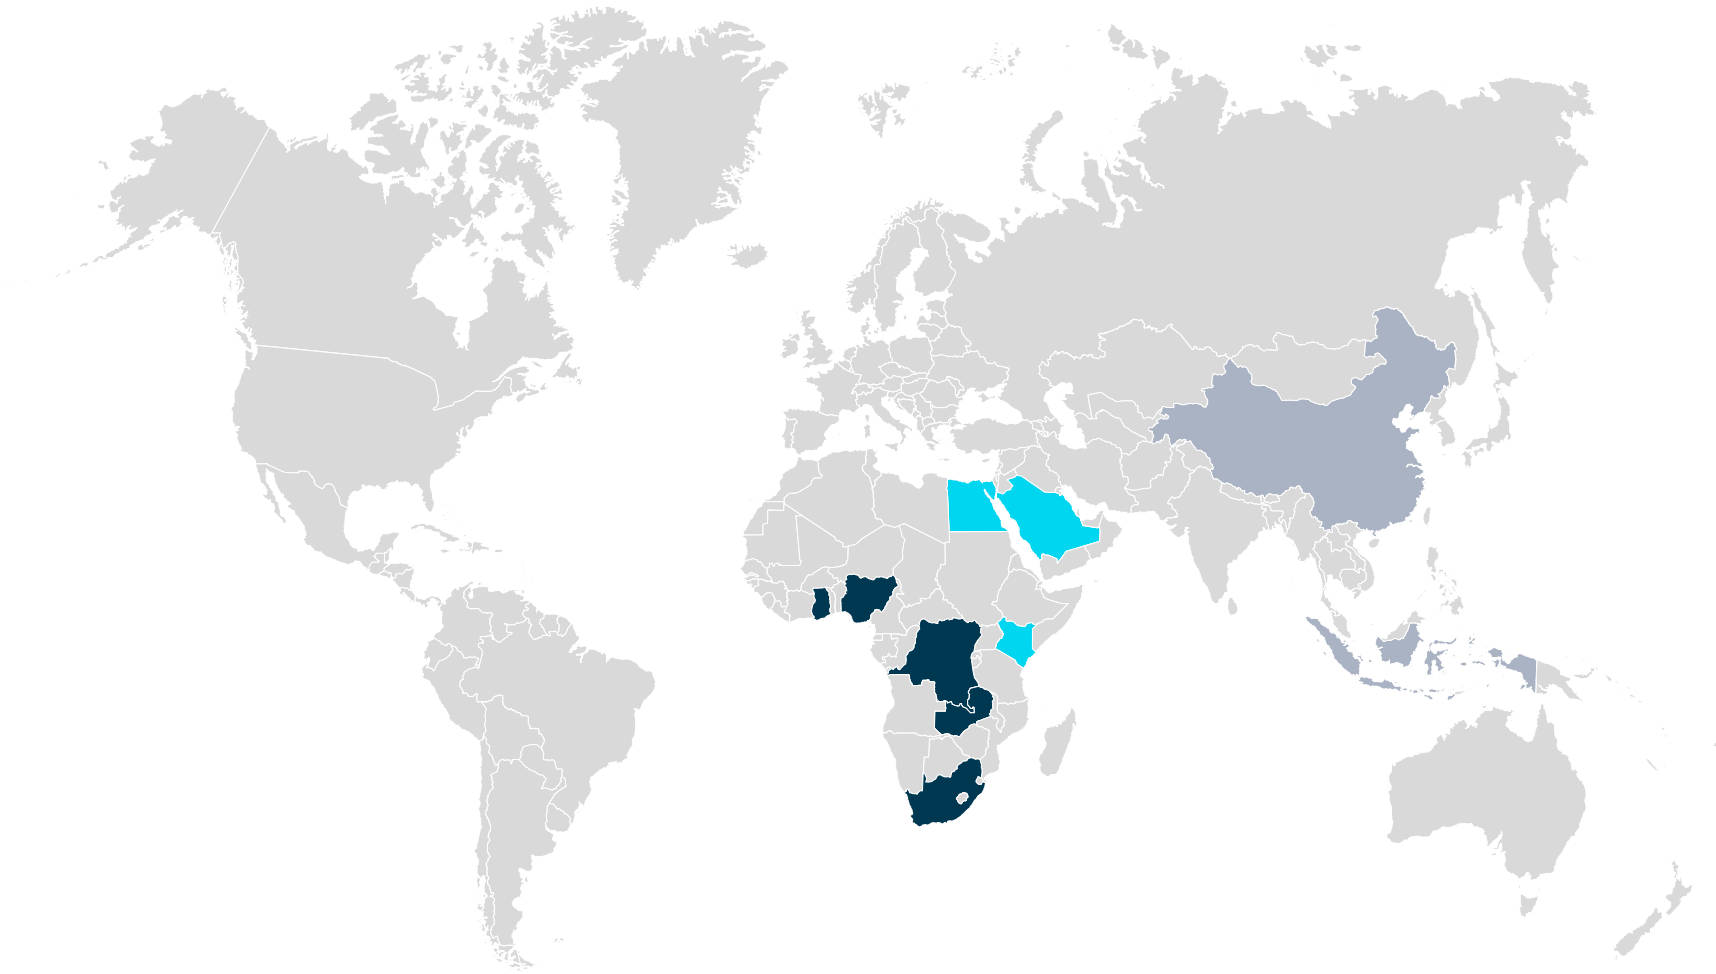

Successfully operating in the mining
industry since **2007**

\$100m+ p.a. in bottom-line cost
reduction & throughput improvements

We operate in Africa and the UAE, with core offices in Johannesburg, Lubumbashi and Dubai

- 1 South Africa
- 2 DRC
- 3 Zambia
- 4 Ghana
- 5 Nigeria
- 6 Egypt
- 7 Kenya
- 8 Dubai
- 9 Abu Dhabi

Our team

4

Clients

5

Approach

6

Case studies

EGCA support clients in nine main areas of value creation

1

Continuous Improvement

Increase revenues, reduce costs and increase operations efficiency

Unit Cost Reduction

2

Procurement and Supply Chain

Optimise supply chains and procurement, achieving reduced costs and enhanced service levels

Strategic Sourcing

3

Capital Effectiveness

Improve project delivery through governance, cost control, and execution discipline to maximise NPV and minimise overruns

Project NPV

4

Organisation Effectiveness

Aligns structure, roles, and behaviours to improve performance, accountability, and decision-making speed

Routines & Ways of Work

5

Digital Transformation

Implements data-driven solutions, automation, and analytics to improve efficiency and decision quality

Automation of Work

6

Energy Transition

Supports decarbonisation through energy optimisation, alternative solutions, and sustainable operational strategies

Energy Optimisation

7

Asset Management

Improves asset reliability, maintenance practices, and lifecycle performance to maximise uptime and value

Total Cost of Ownership

8

Transaction services

Commercial Due Diligence, Mergers and Acquisitions, Investment decisions and business integration

Risk Mitigation

9

Total mine maturity assessment

Survey-based baseline of total mine maturity across 9 critical operating pillars

Case studies

Our consultants possess ample experience in-line and consulting roles, which makes them highly effective in design and implementation work

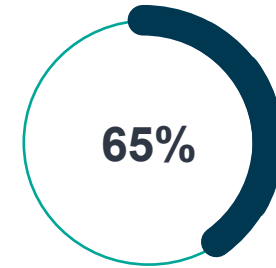

Our people are a **mix of traditional consultants who have worked at top-tier consulting firms** and **experts with deep industry knowledge and strong credentials**. No matter the project, our teams are always adaptive and tailored to the unique needs of each client.

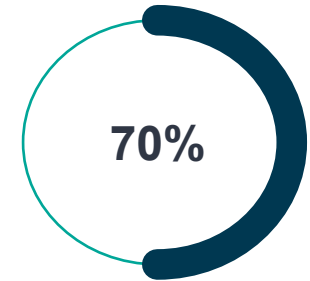

This level of scope allows us to **combine and flex between a highly analytical approach** from consultants highly effective in design and **implementation with that of industry experts** whose level of pattern recognition is owed to years of hands-on experience.

The strengths of our consultants allow us to **partner with clients to create a collaboration that helps us to define lasting goals for success**

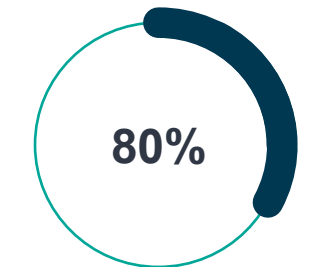

of our professionals have worked at other **top-tier consulting firms**

of our professionals hold **postgraduate degrees**

the average length of our consultant's **work experience**

of our professionals have worked in **management roles**

Our team consists of a diverse group of experienced and skilled consultants, spanning fields such as engineering, mining, finance, and beyond...

Case studies

Our implementation methodology follows 6 key non-negotiable steps which are critical to sustaining results

At EGCA we focus on Efficiency and Profitability: Leveraging Unit Cost Reduction for Long-Term Value Creation

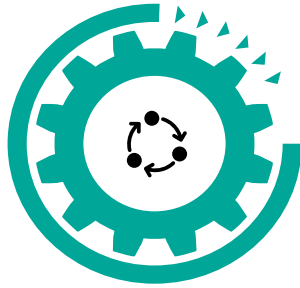

We use our adaptable 6-Arm methodology during implementation to realise benefits identified during the diagnostic, ensuring sustainable transformation

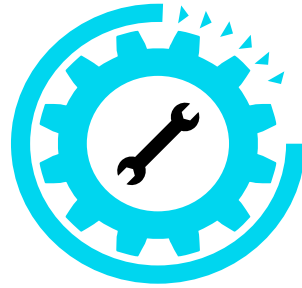

Strategic Alignment & Diagnostics

- Ambition, values and objectives
- Output KPIs linked to leading KPIs and targets
- KPIs cascade and tracking across all levels
- Performance visibility

Process & Systems Optimisation

- Policies and procedures
- Enterprise Resource Systems enhancement and integration
- Digitisation

Asset Performance & Reliability

- Critical asset strategy review
- Reliability-centered maintenance (RCM)
- Condition monitoring and predictive maintenance
- Asset hierarchy & master data clean-up
- Integration of iot/digital twin technologies

Workforce Enablement & Culture

- Job descriptions
- Roles and responsibilities (RACI)
- Capability and skills
- Onboarding and training
- Single-point accountability

Management operating System

- Planning and performance review forums
- KPI tracking and management platforms

Sustainability & Continuous Improvement

- Initiatives progress tracking
- Identification and screening of new initiatives

Change management and communication are woven through all six arms to ensure alignment

Case studies

Identified ~R0.5 – 1.1B in savings opportunity from procurement transformation for a mining client in South Africa

Client challenge

Our client was in the midst of a commodity price boom which hid their rising cost base behind tailwind profitability. Their executive leadership reached out to EGCA to assist them with a well-structured, comprehensive cost reduction diagnostic.

The aim of this exercise was to identify initiatives that would right-size their unit cost base before the commodity pricing turns, so that cost reduction can be well aligned and sustainable, as well as improve ways of working and process adherence in an environment with more than 50% of addressable spend being off contract.

Key deliverables

EGCA deployed 2 dedicated teams to the client site, focusing on 3 main sources of value: Price, Usage and “Ways of Work”.

- Conducted a detailed 6-week diagnostic across R40bn of spend (~R20bn addressable)
- Collaboratively developed a pipeline of 14 practical initiatives to improve efficiency and effectiveness across the procurement department
- Developed an additional pipeline of 14 inventory and warehouse optimisation initiatives
- Identified, valued and scheduled 11 critical sourcing initiatives across 3 implementation waves

Tangible impact

Identified ~**R0.5 – 1.1B** in **annual savings** opportunity (with potential upside):

- Identified **strategic and tail sourcing** savings of ~R0.3 – 0.5B per annum
- Quantified ~R0.3 – 0.6B per annum in bottom-line impact from **inventory optimisation and improvements in ways of work** and contract management
- Developed a structured and staggered **pathway to implementation** over 18 months without increasing permanent resourcing, incorporating internal **capability building and improved management operating systems (MOS)**

Designed new mine planning and execution scenarios to improve IMS by 25-30% and right-size development and stoping crews at a conventional underground mine

Client challenge

Our client operates on two decline mining shafts with reasonable crew performances. They envisaged an uplift in crew performance across both shafts and that raised a concern of running out of minable face length within life-of-mine (LOM).

The exco reached out to EGCA to assist them with a robust, comprehensive diagnostic to pinpoint the **bottleneck** causing face-length unavailability, as well as to formulate a reliable plan/scenario to enhance face-length availability through improved crew flexibility (IMS ratios).

Key deliverables

EGCA deployed a full-time dedicated team to the client site, focused on increasing crew flexibility through improving IMS ratio and balancing development requirements with stoping efficiencies and shaft capacity.

The 6-week diagnostic across two decline shafts achieved the following outcomes:

- **Bottleneck identification** and face-length sufficiency report
- **Crew performance benchmark** and potential uplift model
- **Throughput feasibility model** with recommendations
- Key insights to improve business plan and cost **optimisation** through reduced off-reef development

Tangible impact

Developed six scenarios per shaft to optimise and improve crew efficiencies, balance crew requirements with correct on- and off-reef development, requirements with direct impact on development cost.

Identified potential to:

- Improve crew efficiencies from **300/350 Ca's to 400/450 Ca's** per crew per month (**20% – 25%**)
- Improve IMS ratio/s from **1.3:1 to 2:1**
- Balance crews (development & stoping) to support available face-length for LOM
 - **Reduced crews (stopping) and right-size development crews** across both shafts

Identified ~R175m per annum savings potential through contract harmonisation for a mining company in South Africa

Client challenge

Following a takeover bid, our client wanted to integrate its competitor with its contiguous operations to improve long-term sustainability and economies of scale. The commercial organisation was tasked evaluating and harmonising all commercial contracts between the organisations. The executive leadership reached out to EGCA to assist and drive the initiative.

The aim of the exercise was to identify scope harmonisation potential (price alignment, pricing structure, product standard, etc.) between the 2 entities and to estimate associated savings from such initiatives.

Key deliverables

EGCA deployed a dedicated on-site team to deliver the following:

- **Contract Register Consolidation:** Merged two disorganised legacy registers into a single, unified contract register of *approximately 900 contracts*, structured by commodity using a common taxonomy
- **Harmonisation Initiative Identification** Identified and grouped contracts with overlapping scopes into *approximately 135 discrete harmonisation initiatives*.
- **Spend and Contract Analysis:** Conducted detailed analysis across contracts sharing the same or similar scope — whether with the same supplier or across multiple suppliers — covering spend profiles, product overlaps, price variances, service scope discrepancies, and harmonisation potential
- **Stakeholder Engagement and Scope Alignment:** Engaged directly with end-users to validate savings opportunities, drive harmonisation and standardisation, and obtain harmonised scopes of work to go to market

Tangible impact

Our team identified **~R175m of annualised savings opportunities:**

- R40m in **price and supplier alignment**
- R15m **subject to trial results**
- R120m in support for commercial **tender negotiation**

Created a **structured, cyclical sourcing model, commodity focussed**, to allow for **synergetic gains**, to **reap the benefits** of the integration and to push the harmonisation agenda

MOS Design & Implementation — Platinum Mine

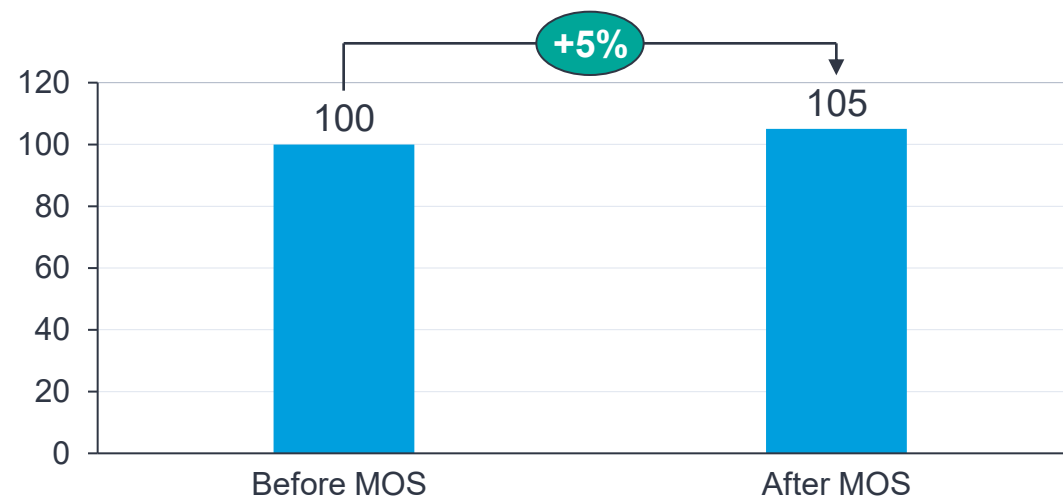

THE PROBLEM

A Platinum mine's existing Management Operating System (MOS) was inconsistent across shafts — meeting cadences varied, agendas duplicated content, and operational decisions were taken without a structured information flow. Frontline supervisors had no clear line-of-sight into daily compliance, and no mechanism existed to measure whether the meetings themselves were effective.

WHAT WE DID

- Conducted MOS effectiveness assessment across all shafts using a structured maturity framework
- Designed standardised meeting questionnaires covering compliance, agenda quality, and decision velocity
- Automated the assessment via Microsoft Forms — anyone could rate any meeting from any device
- Redesigned cadence: daily SOM, weekly review, monthly performance — each with defined inputs and outputs
- Implemented and trained supervisors; measured effectiveness pre- and post-intervention

OUTCOME — THROUGHPUT UPLIFT

Indexed daily throughput (Before MOS = 100). Improvement sustained over 3-month measurement window.

+5%

throughput improvement post-implementation

100%

of supervisors trained on standardised cadence

KEY INSIGHT · Measuring meeting effectiveness is the lever — most clients run MOS without ever asking if it works.

Platinum Mine Turnaround Strategy

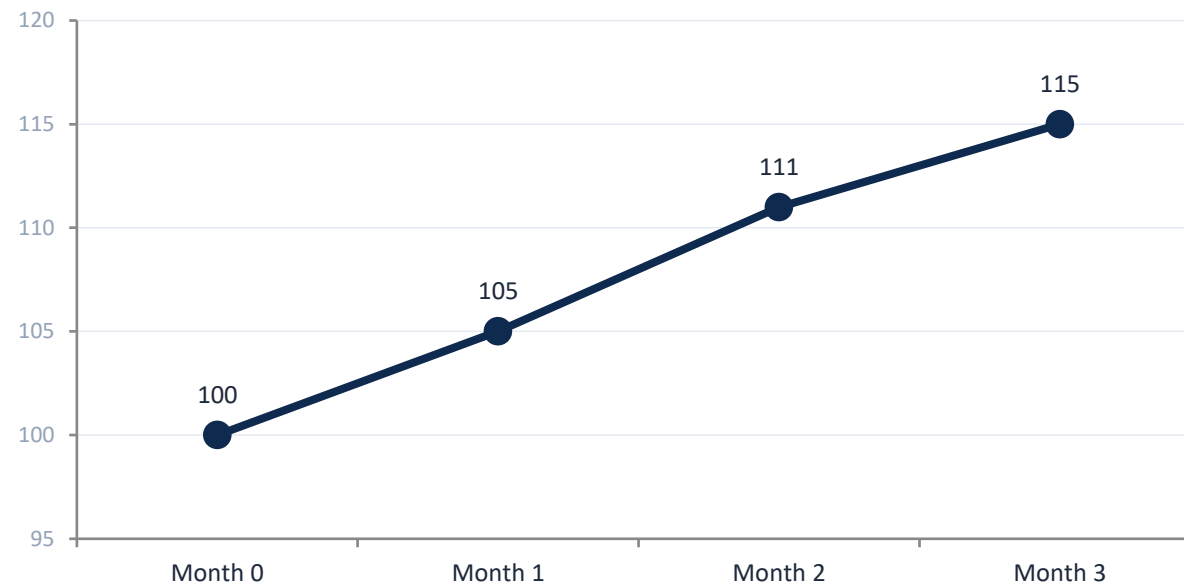

THE PROBLEM

A mechanized underground mine was underperforming against plan across multiple dimensions: throughput was below target, unit costs were elevated, and TMM (Trackless Mobile Machinery) availability was eroding. Root causes were unclear because operational data sat in silos and no consolidated view of the value chain existed. The operation needed a rigorously diagnosed turnaround plan, not a cost cut.

WHAT WE DID

- End-to-end value chain assessment using the 5-Why's: site visits, interviews, qualitative observations
- Root Cause Analysis on the seven recurring weaknesses across People, Asset Management, Ways of Working, and Supply Chain
- Quantified the prize per lever — bottleneck-by-bottleneck, with margin uplift modelled per intervention
- Built a sequenced turnaround plan with clear ownership, milestones, and weekly tracking cadence
- Stood up a war room rhythm to drive execution and report progress to leadership weekly

OUTCOME — 3-MONTH THROUGHPUT RAMP

Throughput indexed to Month 0 baseline. Trajectory driven by drifter, fuel and lubricant interventions.

+15%

throughput uplift in 3 months

↓ Costs

drifter, fuel & lubricant unit cost reduction

KEY INSIGHT · Throughput and cost moved together — once we fixed asset reliability, both KPIs unlocked simultaneously.

Styldrift MOS — Cadence Implementation

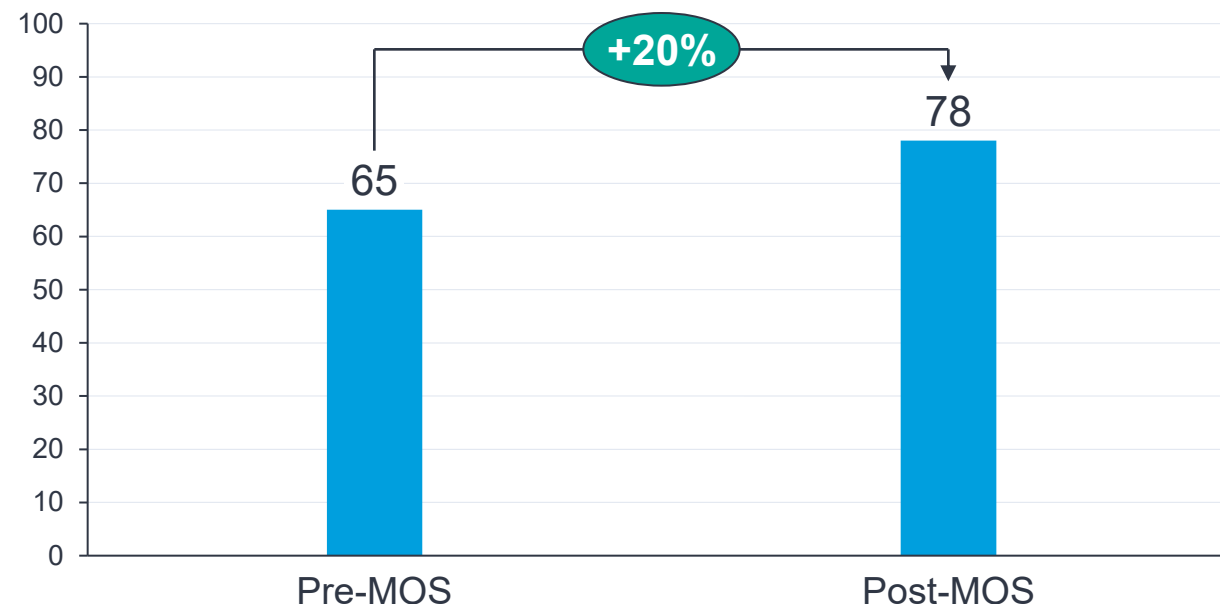

THE PROBLEM

Following the turnaround diagnosis, Our client had a clear plan but no operating rhythm to execute it. Daily meetings were ad-hoc, weekly reviews lacked structure, and there was no escalation path between shaft, section and exco level. Initiative tracking happened in spreadsheets that drifted out of sync. Without a structured MOS, the gains from the turnaround would not be sustained — and visibility on TMM availability and production performance would remain reactive rather than predictive.

WHAT WE DID

- Adapted their MOS framework to the operating model — daily, weekly, monthly cascade
- Designed a tiered meeting structure: Daily SOM → Weekly Section Review → Monthly Business Review
- Built EGCA-led standard procedures, agendas, and KPI packs for each meeting layer
- Ran shadow meetings with leaders, then transitioned ownership to internal chairs
- Embedded action tracking and escalation discipline — the right issue raised at the right level

OUTCOME — FLEET AVAILABILITY

TMM fleet availability — illustrative pre-/post-MOS comparison. ~20% relative improvement.

+20%

fleet availability improvement

3-tier

daily / weekly / monthly meeting cadence

KEY INSIGHT · MOS isn't about more meetings — it's about the right issue surfacing at the right level, fast.

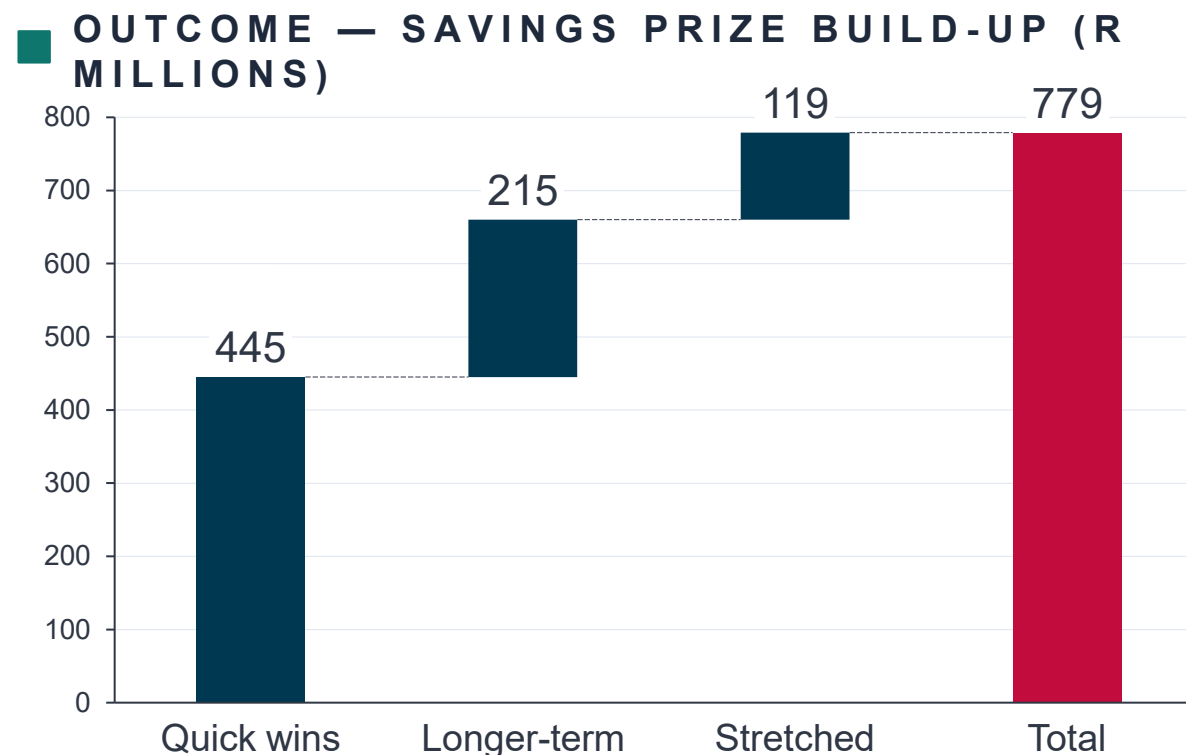

PGM Mine Cost Reduction — Procurement Diagnostic

THE PROBLEM

A platinum mine faced sustained margin pressure and needed to identify rapid overhead cost-out opportunities without compromising operational delivery. Procurement spend was fragmented across multiple categories, supplier rationalisation had stalled, and there was no consolidated view of the addressable savings prize. Leadership needed a defensible, prioritised list of initiatives — quick wins separated from longer-term plays — that they could action immediately.

WHAT WE DID

- Conducted a full diagnostic on IWL overhead and procurement spend across all major categories
- Identified 22 discrete savings opportunities, sized by quantum, effort, and risk profile
- Segmented prize into Quick Wins, Longer-term Benefits, and Stretched Benefits with clear sequencing
- Created one-page initiative summaries — owner, action plan, savings target, timeline — for each
- Prioritised initiatives based on speed-to-value and downside risk, ready for executive sign-off

R779m total identified prize (≈ 8% of overhead). R445m (5%) requires lower investment to realise.

R779m

total identified savings prize (8%)

22

discrete initiatives prioritised

KEY INSIGHT · Sized prize beats vague aspiration — every initiative had an owner, a number, and a timeline.
